

READ ME!

Day 4 folder contains the following objects:

1 Folders with Videos. VideosKS contains 10 videos on the Krussel and Smith (1998) model. Each video is max 15 minutes long. The videos cover the theory (solving models of heterogenous agents under aggregate uncertainty) and describe the Matlab codes.

VideosEndogenous contains videos (on theory+codes) for the endogenous labour supply model.

Videos HANK contains videos on the HANK model again covering slides/theory+codes.

You should watch all videos before class.

2. Folders with Codes. CodesKS and CodesEndogenous will be used in class to do exercises. Each of these folders contains Matlab codes to solve models with aggregate uncertainty. CodesHANK will be described in VideosHANK and they are meant for you to learn how to solve the HANK model and to experiment at home!

3. Slides. SlidesKS cover the Krussel and Smith model and the Endogenous Labour supply model. SlidesHANK present the HANK model. These slides are covered in Videos. We will also use them in class.
